

BUMI COLD GALVANIZING ZINC SPRAY (CGZ-029)

Bumi Cold Galvanizing Zinc Spray (CGZ-029) is a Premium Grade Corrosion & Rust Preventive Spray which has been tested according to ISO 9227 (Corrosion tests in artificial atmospheres/Salt Spray Tests)

for 240 hours and 480 hours that resulted with ZERO CORROSION!

(A) About Bumi Cold Galvanizing Zinc Spray :

1. Bumi Cold Galvanizing Zinc Spray liquid aerosol product for conveniently applying a 95% bonded zinc rich coating to metal parts to achieve a cold galvanizing effect which is comparable to hot galvanizing.
2. This zinc rich primer will electrochemically bonds with metal to form a protective sacrificial film that protects the underlying metal and guards against corrosion.
3. Zinc acts like a sacrificial anode to protect ferrous metals from corroding.
4. Bumi Cold Galvanizing Zinc Spray can be used as a primer for bare metal. It can be sanded and top coated with paint or epoxy for further protection to the metal substrate.
5. Bumi Cold Galvanizing Zinc Spray can also be used as a temporary coating to protect parts from harsh environments and latter be removed with Acetone when the parts are ready for further processing.
6. Prevents rust and corrosion for up to 5 years.
7. Highly resistant to water, humidity and salt spray.

(B) Application of the Bumi Cold Galvanizing Zinc Spray :

1. Provides top notch corrosion protection to weld seams, fencing, storage tanks, pipe lines, steel door, window frame, gates, garage doors, trailer, couplings, internal car body panels, structural steel, guard rails, drains, boilers, and fittings.
2. Useful in marine, aviation, trucking, fencing, metal fabrication, oil, chemical, paper manufacturing industry.
3. Manufacturing plants, commercial buildings, schools, food processing plants or any establishment which uses or is built with exposed iron or steel.
4. Metal protection or the renewal of worn or damaged galvanized surfaces is required.
5. Protection of investment in equipment and facilities without the expense of, or inability to use hot zinc dipping.
6. It gives any metal surface full galvanized protection without the inconvenience and expense of hot dipping.
7. Even the most out of the way, hard - to - get-at surface can be quickly galvanized with Bumi Cold Galvanizing Zinc Spray.
8. Long - lasting Protection - like hot zinc dipping, Bumi Cold Galvanizing Zinc Spray actually electro - mechanically bonds itself to metal surfaces to give them years of superior corrosion protection.
